

A red tractor with a tillage implement is working in a green field. The tractor is positioned in the middle ground, moving from left to right. The field is lush and green, with a dirt path visible. In the background, there is a dense forest of green trees on a hillside. The sky is blue with some white clouds.

**We believe in planting seeds today to harvest a better tomorrow.
In steps that leave footprints in our soil, not our planet.
In an electric tractor's *quiet power* to make a difference.**

Taking care of the land isn't just how we work. *It's how we live.*

As pioneers in electric tractors, our roots run deep. Our mission is simple: to produce commercially available electric tractors that work in harmony with nature and the lives of its stewards. Driven by integrity and innovation, we're leading the transition to zero-emission regenerative agriculture and utility operations to help cultivate healthier crops, communities and businesses. A smarter, simpler and more sustainable future is built by how we live today. A future that's built when we *LIVE ELECTRIC.*
